

TOWER CLEAN-UP AND TREATMENT DESIGNED FOR SMALL COOLING TOWERS & EVAPORATIVE CONDENSERS

Water Treatment Products

Season Start & Season Treat

Step 1 - SEASON START®

The best and the safest dry cleaner. Season Start is a powdered sulfamic acid formulation that contains the best inhibitors available for protecting all metals including galvanizing. A built-in pH color indicator shows how much to use, when to add more and helps tell when the system is clean. A wetting agent and an anti-foam agent are included to help it do a better cleaning job.

- Lowers head pressure
- Removes scale
- Safe on all system metals
- Safe and easy-to-use... use one container per 10 tons of cooling capacity

Step 2 - SEASON TREAT®

This flow-through package design makes it simple to treat your tower water and prevent scale and the associated problems that go along with it. It's as simple as unwrapping

the package and placing it into the sump in an area of good water flow. Once you've begun treatment, set the bleed at 1/6 gpm for every 10 tons of capacity and forget about it until next year... the treatment lasts the entire season.

- Patented Micromet® Plate Product
- Prevents scale and corrosion
- Environmentally Safe
- One charge lasts one season (6 months)
- Biodegradable
- Easy-to-use... one container treats 10 tons of cooling capacity (for corrosion, use one container per 5 tons)

Packaging

Season Start	4360-88
Season Treat	4364-88

Read and understand the product's label and Safety Data Sheet ("SDS") for precautionary and first aid information.

The SDS is available on the Nu-Calgon website at www.nucalgon.com.
